Product Name:
Slake Durability Test Apparatus

Product Code: SCHOOL-ROK700016

Description:

Slake Durability Test Apparatus

Technical Specification:

Slake durability is a simulated weathering test to determine abrasion resistance during wetting and drying cycles of shale and similar soft rocks as used in embankments and other construction-related applications.

This test method has been developed to assess the deterioration of rocks over a period of time when subjected to water immersion.

The percent loss of mass is referred to as the slake durability index.

Samples are alternately tumbled in mesh drums through a water medium and oven-dried for two cycles.

The slake durability apparatus consists of a motorised drive unit which is mounted on a baseplate and which can rotate two or four drums at a speed of 20 r.p.m.

The test drums are manufactured from 2.00 mm mesh, 140 mm dia. x 100 mm long

The tank assemblies are filled with water to a level 20mm below the drum axis.
